## Awards

## In Press

### [WWDC 2010 on Engadget](#)

“We met up with both Victor Toporkov and Murad Nazaraliev of Vito Technology during WWDC this past week, and while we know the company's name well from their great Star Walk and Solar Walk apps (the first one won an Apple Design Award this week, and the second one is quite popular, too), we learned some interesting facts about the history of the company. Toporkov now lives in the United States, but the company has its roots in Novosibirsk, the biggest city in Siberia. Back in the 1950s, Russia created a scientific center out in the middle of Siberia, consisting of a whole group of nuclear and scientific research facilities.”

### [Macworld 2010 on Engadget](#)

“The first app we saw was called Solar Walk, and while Star Walk will help you find and explore information about the stars, Solar Walk is designed to do the same with planets. The app features a beautiful (and accurate) simulation of the solar system, complete with all of the planets orbiting trails, and an adjustable clock so that you can see where Mars will be in 2029, if you so choose.”

## Bestsellers

An exquisite stargazing tool that combines astronomical data with premium technology to deliver an effortless journey through thousands of stars, comets, and constellations. [Learn more...](#)

### Star Walk 2

A powerful tool for exploring our solar system which takes you on a fascinating trip through the vast realms of space. The app introduces an amazing solar system model with beautiful 3D representations of the Sun, the Moon, planets, satellites, planetary atmospheres and other space objects in the smallest details. [Learn more...](#)

### Solar Walk 2

A new augmented reality game that lets you see and rule incredibly lifelike dinosaurs with your device's camera. See dinosaurs in real size, bring those huge monsters into your world, walk together and make cool photos and videos. [Learn more...](#)

### Monster Park

A perfect app for introducing kids to astronomy. With colorful images and friendly narrators, kids as young as four can begin to recognize constellations, planets of the solar system and grasp the fundamental principles of astrophysics. [Learn more...](#)
